

## **Deco Breeze® offers a New Way to "Be Green" and "Save Some Green" During the Hot Days of Summer**

San Diego-based Global Product Resources, Inc. (GPR), a leading designer, manufacturer, and distributor of home decorative products, offers an eco-friendly, cost saving and fashionable solution for keeping the indoors cool on hot days.

According to the U.S. Department of Energy, two-thirds of all homes in the United States have air conditioners. Using anywhere from 500 to 3500 watts per hour, air conditioners consume a substantial amount of energy, and result in high utility bills for homeowners and businesses.

Deco Breeze® indoor portable fans are rated at 45 watts per hour at maximum speed (using less energy than a light bulb) and create enough air movement in a room to make it feel up to 10 degrees cooler. With its use, comfort can be maintained for up to a 3% reduction in energy consumption for every one-degree increase in thermostat settings!

According to the company's Vice President of Sales, "Deco Breeze is committed to providing its customers with a way to conserve energy while keeping their environments comfortable. With more than 160 designer styles, customers can prominently place Deco Breeze fans within homes and offices for year-round use and produce significant energy and cost savings."

GPR has touted its Deco Breeze® line as "the coolest addition to home décor" and is now showing customers that in addition to providing a fashionable fan to cool the home and office, it can also make a difference in conserving energy and saving money.
